Re: Policy Proposal to Implement OPTN's Oversight of Vascularized  
Composite Allografts (VCA)

Dear Dr. Berg:

As you know, the U.S. Department of Health and Human Services (HHS) modified the OPTN Final Rule to include VCAs among transplantable organs, effective July 3, 2014. The Health Resources and Services Administration (HRSA) directed OPTN to develop implementing policies before such modifications became effective. At its June meeting, the OPTN Board adopted an interim policy, without public comment but with a September 1, 2015, sunset provision. The VCA Transplantation Committee has solicited public comment on a proposal to make such policy permanent. Both provisions would permit living VCA donations.<sup>1</sup>

The National Catholic Partnership on Disability (NCPD) was established thirty years ago to implement the U.S. bishops' *Pastoral Statement on People with Disabilities*. On behalf of NCPD and the fourteen million disabled Catholics it serves, I urge the OPTN Board to withdraw interim authorization for living VCA donation immediately. I further object in the strongest terms to its inclusion in the VCA Committee proposal.

According to that committee, "VCA approved programs have not performed living VCA donation to date,"<sup>ii</sup> and, further, "there are no candidates for living VCA donors registered with the OPTN."<sup>iii</sup> The Board's authorization of living VCA donations in its expedited policy was therefore gratuitous, made in haste without public feedback, and has only served to taint the present public comment process by revealing its predisposition on this ethically charged issue.

The VCA Committee represented that, in modifying the Final Rule, HHS “*intentionally* did not prohibit the possibility of living VCA donors.”<sup>iv</sup> If this was meant to imply that HHS supported living VCA donation, it mischaracterized the Department’s position. In response to a public comment asking “whether the OPTN will allow live donations or only recover a hand or face from someone who is about to die [.]”<sup>v</sup> HHS responded:

Live donor organs are addressed by OPTN policies. The most common are kidney and liver. Although a potential living donor may express a desire to donate a VCA, no transplant center currently provides this service. Organs are not procured in the U.S. from any person “who is about to die,” but in fact are obtained either willingly from a living donor or from a person who is already dead ....<sup>vi</sup>

Rather than endorsing living VCA donation, the Department avoided answering the question directly. Such caution was not surprising since, with only one of twenty-nine public comments raising the issue, the matter had not received the full airing its gravity deserved.<sup>vii</sup>

UNOS’ Director of Policy further claimed that OPTN did not even “have the authority to prohibit living VCA donation [.]”<sup>viii</sup> Yet, policies the Board adopted this November to govern living kidney, liver, pancreas, lung, and intestine donation authorized recovery hospitals to “exclude a donor with any condition that, in the hospital’s medical judgment, cause[d] the donor to be unsuitable for organ donation”<sup>ix</sup> and required such hospitals to “exclude all donors who meet ... [certain] exclusion criteria[.]”<sup>x</sup> The Director gave no reason for this difference except to say that OPTN did “have the authority to make ... patient safety requirements regarding living VCA donation.”<sup>xi</sup> All the same, if OPTN expects hospitals to exclude living donors when their medical risks are high, it should require such exclusions when the risks are serious and certain. Live donation of faces, limbs, and abdominal walls constitute indisputable harm, a severe loss of function, a disability under Federal law<sup>xii</sup> that OPTN should categorically exclude.

Of particular concern to NCPD is the prospect of adults “mentally incapable of making an informed decision”<sup>xiii</sup> as living VCA donors. The OPTN Board recently extended such eligibility from living kidney to living liver, pancreas, lung, and intestine donors.<sup>xiv</sup> Though the proposals did not include living VCA donors, the VCA Committee chair “felt all of the proposed policy elements would be appropriate for potential living VCA donation.”<sup>xv</sup> Thus, OPTN could revisit the issue soon and its consideration of such policy proposals, if specific to VCA donation, may not require that it seek input from the general public.<sup>xvi</sup>

In defense of including mentally disabled adults as living donors, the claim is made that there are cases, “extremely rare,” involving a parent caregiver in need of an organ transplant where living donation is in the person’s best interest.<sup>xvii</sup> Whatever its merit when kidney, liver, pancreas, lung, or intestine transplants are involved, such claim carries no weight when faces or uteruses are at issue. Moreover, any benefit such persons will actually receive from donating their limbs or abdominal walls are hypothetical at best and outweighed by the certain and severe harm they will suffer. Further, such caregivers could easily confuse their own best interest with that of their charge or unduly influence the choice of someone mentally disabled and dependent on their care. And even the most conscientious health professionals are not wholly free from the temptation to

discount the quality of life people with mental disabilities possess. With these policies, OPTN has opened the door to organ donation from those persistently comatose or otherwise mentally incapable of informed consent as payback for their cost of care and has taken a step backwards to the days when “mental defectives” were sterilized to keep them from “sap [ping] the strength of the State [.]”<sup>xviii</sup>

NCPD stands second to none in appreciating organ donation as an example of human solidarity. Yet, it cannot be gainsaid that the bodily restoration of some cannot justify physician-assisted mutilation of others. In defending its endorsement of living donation, the VCA Committee “felt it was prudent to not set restrictive policy language in this evolving clinical area.”<sup>xix</sup> But it is a perverse prudence indeed that defies a core precept of practical wisdom, that the end can never justify the means, and substitutes in its place the state of medical science as the final arbiter of right and wrong.

For these reasons and those set out by the National Catholic Bioethics Center in its separate comments, I urge an entire rejection of these policies. Simply put, no living donor should be included in VCA donation policies.

Respectfully submitted,

Stephen L. Mikochik  
Chair emeritus  
National Catholic Partnership on Disability
